REVERSE OSMOSIS
DRINKING WATER SYSTEM

Model TS3T-24
Manual

R.O. DRINKING WATER SYSTEM
ONE YEAR LIMITED WARRANTY

What Does This Warranty Cover?
This warranty covers any defects in materials and workmanship of the R.O. Drinking Water System when installed and operated within recommended parameters, with the exceptions stated below.

How Long Does The Coverage Last?
The manufacturer will warrant its R.O. Drinking Water System, for a period of one year from the date of purchase. All implied warranties including merchantability and fitness for a particular purpose are limited to one year from the date of purchase for the R.O. Drinking Water System. Some states do not allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you.

What Will The Manufacturer Do?
The manufacturer will repair or replace at its discretion any defective component. You must pay any labor charges. You must also pay for shipping or travel charges to return the defective part(s).

What Does This Warranty Not Cover?
This warranty does not cover the disposable sediment and carbon filters whose service life depends on feed water conditions. In addition, the membrane is only warranted if the required feed water conditions are met.

The above warranty will also not apply to any part of the R.O. Drinking Water System that is damaged because of neglect, misuse, alterations, accident, misapplication, physical damage, or damage caused by fire, acts of God, freezing or hot waters or similar causes. Consequential and incidental damages are not recoverable under this warranty. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

We recommend that you use only authorized replacement parts since improper parts or incorrectly performed maintenance or repair voids this warranty.

How Do You Get Service?
In order to be eligible for service under this warranty you must (a) contact your local dealer who supplied the unit or (b) contact the factory for the dealer nearest you.

How Does State Law Apply?
This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

IMPORTANT NOTICES:
This reverse osmosis system contains replaceable treatment components critical for effective performance. It is the user’s responsibility to, and the manufacturer strongly recommends that the user, periodically test the product water to verify the system is performing satisfactorily.

DO NOT USE WITH WATER THAT IS MICROBIOLOGICALLY UNSAFE OR OF UNKNOWN QUALITY, WITHOUT ADEQUATE DISINFECTION BEFORE OR AFTER THE SYSTEM.
PRIMARY ASSEMBLY COMPONENTS

PREFILTER: Sediment Carbon Block Filter
MEMBRANE: Thin Film Composite (T.F.C.)
POST FILTER: Activated carbon filter

R.O. MEMBRANE INFORMATION

TYPE: T.F.C.-24
RATED MEMBRANE PRODUCTION\(^1\): Produces 24 ± 4 gpd (76-106 lpd)
RATED MEMBRANE TDS REDUCTION\(^1\): 95% minimum

\(^1\) Measured at Industry Standard condition of 65 psig (450 kPa), 77° F (25°C), 500 ppm/mg/l TDS and discharging to atmosphere. NOTE: Actual system production and contaminant reduction will depend upon water temperature and pressure, TDS level, membrane variation and usage pattern.

CONDITIONS OF USE

WATER SUPPLY: chlorinated or non-chlorinated
WATER PRESSURE: 40-100 psig (280-690 kPa)
WATER TEMPERATURE: 40-100°F (4-38°C)

WATER SUPPLY PARAMETERS

HARDNESS: less than 10 gpg (170 mg/l) or soften
IRON: less than 0.1 ppm (also mg/l)
MANGANESE: less than 0.05 ppm (also mg/l)
HYDROGEN SULFIDE: none
pH RANGE: 3-11
TDS LEVEL: no more than 2000 ppm (also mg/l)
CHLORINE\(^2\): see note below
BACTERIA\(^3\): water source must be potable

\(^2\) Chlorine will damage a T.F.C. Membrane. The Sediment/Carbon Prefilter will remove chlorine from the incoming water. Change filter every 6 to 12 months, more often if water contains more than 1 ppm chlorine.

\(^3\) Do not use with water that is microbiologically unsafe or of unknown quality, without adequate disinfection before or after the system.

TYPICAL TS3T-24 UNDER SINK INSTALLATION DIAGRAM

Water flows from the Feed Water Valve to the Sediment/Carbon Block Prefilter. Water then flows through the R.O. Membrane. After the R.O. Membrane, the R.O. water flows to the Drinking Water Holding Tank for storage. When R.O. water is needed, it flows through the Activated Carbon Post Filter to the Dispensing Faucet.
Figure 2

NOTE: FOR BEST FLOW RATE, KEEP TUBING FROM RO MANIFOLD TO FAUCET AND HOLDING TANK AS SHORT AS POSSIBLE

BASEMENT FLOOR

PLEASE NOTE: IF AIR GAP ON FAUCET IS NOT USED IN BASEMENT INSTALLATIONS, A PROPER AIR GAP MUST BE CREATED. PLEASE CHECK WITH LOCAL PLUMBING CODES. SEE EXAMPLE ABOVE.
